

Version
2.0

For Sun
SPARCstations
running Solaris 2.3
or later

Macintosh Application Environment

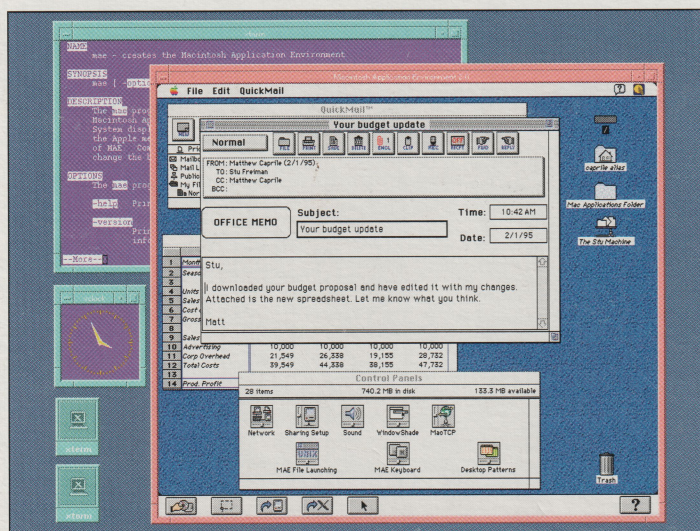

The virtual Macintosh for open systems.

Macintosh Application Environment

Run Macintosh applications on your UNIX workstation.

Macintosh Application Environment provides a complete implementation of Macintosh System 7.1 in a standard X Window. Now you can enjoy the added productivity of using popular off-the-shelf Macintosh applications right on your workstation. And because Macintosh Application Environment has AppleTalk capabilities, you can share printers, files, and electronic mail with other Macintosh users on the network.

It makes networking easy.

Built-in support for AppleTalk lets you share documents, electronic mail, and printers with Macintosh users and other users of Macintosh Application Environment. Now UNIX workstations can integrate more tightly with your organization's Macintosh systems. And support for MacTCP allows access to the Internet and TCP/IP-based applications.

It integrates smoothly with UNIX.

Macintosh Application Environment is fully integrated with the standard UNIX file system. This allows you to copy and paste text and graphics between the UNIX and Macintosh environments. Macintosh Application Environment organizes all your UNIX files and applications, and lets you use control panels from the Macintosh desktop to configure your keyboard, mouse, and monitor settings to suit your style of computing.

It's a virtual Macintosh.

Macintosh Application Environment gives you the friendly look and feel of a Macintosh computer, including pull-down menus, scroll bars, and pop-up dialog boxes. You'll have the same file-handling and file-navigation advantages enjoyed by millions of Macintosh users. Version 2.0 also includes several features of Macintosh System 7.5, as well as improved performance, QuickTime Player and HyperCard Player, and support for Macintosh sound-based applications.

Contents:

- A CD-ROM that contains Macintosh Application Environment, Apple DocViewer, SimpleText, sample applications, *Macintosh Application Environment User's Guide*, and *Macintosh Application Environment System Administrator's Guide*
- For HP/UX: STREAMS/UX for AppleTalk connectivity
- *Macintosh Application Environment: Installing and Getting Started* guide

Requirements:

- X Window System 11 Release 4 or 5
- A window manager such as Motif or OPEN LOOK
- RAM: 16MB minimum; 32MB recommended
- Hard disk space: 16MB minimum; 22MB recommended
- Local or network access to a CD-ROM drive
